Partnership to deliver spreadsheet control solutions for pharma and biotech

1 July 2009

Prodiance and Xyntek have announced a strategic partnership to deliver spreadsheet control solutions to help global pharmaceutical and biotech organisations mitigate enterprise risk and improve compliance with 21 CFR Part 11 mandates.

The partnership enables Xyntek to provide best-of-breed IT consulting services including installation, training, project management, and advisory to pharmaceutical and biotech organisations deploying the Prodiance Enterprise Spreadsheet Manager system. Under the partnership, the companies will market and deliver the combined solution.

'Uncontrolled and unmonitored spreadsheets, Access databases and other end user computing (EUC) applications can expose life sciences organisations to significant non-compliance and operational risks,' said Elliot Abreu, vice president at Xyntek. 'A sustainable and automated solution to mitigate these risks requires the combination of domain expertise, best practices and value-added services, combined with market leading technology. Xyntek and Prodiance are now providing a combined, best-of-breed solution to address these needs.'

'We're very pleased to add Xyntek as a trusted channel partner,' said Dr Soheil Saadat, president and CEO of Prodiance Corporation. 'The combination of their domain expertise and world class IT services will help accelerate the adoption of Prodiance Enterprise Spreadsheet Management technology within pharmaceutical and biotech organisations on a global basis.'
